Dear Commissioner Henney,

It has been brought to my attention that antibiotics used to treat human disease are fed to poultry. I urge you to not allow these antibiotics to be used in livestock feed if that antibiotic is used in human medicine. This is of particular importance to me, as my husband had colon cancer and has to limit the intake of meats and poultry. I purchase only poultry that has not been fed any of the above. This is an added cost to us, but we have to be very cautious. I am concerned for all those families who can't afford the luxury of the non antibiotic meat and poultry.

Thank you so much for your attention.
